· Demo on the progress and completed features to the Trainer.

Projects

Organization: Cognizant   Technology Solutions India Pvt. Ltd., Chennai

Client: Product & Details Page

Project:

In this project All the UI parts is created by using material ui framework. The web application is consisting of a header which has signup button and search bar, below header it has a navbar which can route through multiple pages. In the body of the page, it has two columns.

One is for product filters and another one is for product details. All the products in the details page are clickable. Once clicked on a particular product it will render a new page which will show all the product details in brief also the new page will have a Cart button so user can add required products in their cart

In cognizant cheers page, we can choose products of various categories such as Electronics, Sports, Outdoor, Travel and Health. If we want to see details of the specific product, we need to click description of the product. So that, it will navigate to corresponding details page. In Details page we can increase and decrease quantity of the product. If we click "add to cart" button, then selected product will be added to the cart. Finally, data of cart page, Cart and Product details page will be stored in DB.

Tools   & Technologies:

HTML5, CSS3, Node js, MaterialUI, advanced JavaScript, JSON, Bootstrap, ExpressJs, MongoDb

Role:

· Perform Front-end Web Development using HTML5, CSS3, Node js, MaterialUI, advanced JavaScript, JSON, Bootstrap, ExpressJs, MongoDb
